

Baker Botts: Inflation Reduction Act Capabilities

The Inflation Reduction Act (IRA) of 2022

On August 16, 2022, the United States enacted the most significant clean energy legislation in the nation's history. The Inflation Reduction Act of 2022 ("IRA") will be an outsized influence over investments across the energy landscape for the coming decade, and every participant in the U.S. energy market should be familiar with the key aspects of this new legislation.

IRA will provide hundreds of billions of dollars in direct government support for a vast range of energy infrastructure investments, from renewables like solar, wind, and geothermal power generation, to hydrogen and renewable natural gas production, carbon capture, electric vehicles and charging infrastructure, energy storage, sustainable fuels, to enormous support for the build out of domestic manufacturing of energy transition systems. This direct government support will facilitate trillions of dollars of investment in U.S. energy infrastructure over the coming decade.

IRA also introduced new, more flexible tax credit monetization methods, including "direct-pay" and credit transferability, Baker Botts is crafting creative solutions and structures utilizing such methods for clients looking to finance their projects. We are actively monitoring, reporting and participating in the regulatory process that will set the bounds of how the market can and will adopt important aspects of IRA.

While expanding the amount and scope of tax support for energy transition investment, IRA implemented a number of conditions to realizing the full value of the available credits. These include compliance of certain prevailing wage and apprenticeship requirements, domestic content thresholds and a series of geographic tied incentives. We are actively working with clients to develop all forms of agreements and documentation to meet these requirements, or account for remaining uncertainty in the application of these rules.

We are providing technical advice on tax credit availability to projects in all stages of development, from planning to construction to retrofitting or repowering. In addition, our attorneys assist clients in debt financing clean energy projects through other federal programs, including Sections 1703 and 1706 loan guarantee programs provided by the U.S. Department of Energy, U.S. Department of Agriculture programs for rural energy projects, as well as related programs under the Bipartisan Infrastructure and Jobs Act of 2021.

Global Investment Opportunity

For foreign investors that want to enter or expand their position in the U.S. energy transition, IRA represents a unique opportunity to build sustainable value in the U.S. energy market. Our team has helped countless inbound investors navigate the challenges of the U.S. energy market by leveraging our depth of experience in transitional and traditional energy markets. Our team also has access across the landscapes of development and operational assets and can often facilitate valuable introductions.

"Eminent practice held in high regard for advising on the full range of domestic and international tax structuring matters and high-value corporate transactions. Regularly provides counsel on state and local tax (SALT), as well as sensitive controversy and litigation issues."
